

CS Short Reflection

by Sean Lester C. Villarin

This full year CS project taught me many things about python coding, html, SQL, front end and backend technologies, and etc. It has also helped me implement codes into real life situations and major problems. This project gave me values suitable for coding. With the project, it helped me realize how important coding is, because without coding, digital websites, robotics, and other major contribution to our life, like devices and etc., won't be here.
